

PANEL HPL PARA ASIENTO 4CS EN ACERO INOXIDABLE 316L

El laminado HPL (High-pressure decorative laminate) es el laminado decorativo a alta presión, un panel formado por capas de fibras de celulosa impregnadas de resinas termoendurecedoras, sometidas a un proceso de alta presión que consiste en aplicar simultáneamente calor y presión. Esto determina la fluidificación y al mismo tiempo la policondensación de las resinas con el resultado de obtener un material homogéneo, no poroso y con el acabado superficial que se desea. El laminado HPL se suministra en forma de paneles, disponibles en diferentes medidas, espesores y acabados superficiales.
