

ASSISE EN HPL POUR SIEGE 4CS EN ACIER INOX 316L

Le stratifié haute pression HPL (High-pressure decorative laminates) est un stratifié décoratif à haute pression, un panneau constitué de couches de fibres de cellulose imprégnées de résines thermodurcissables soumises à un processus à haute pression qui prévoit l'application simultanée de chaleur et de la pression. Cela entraîne à la fois la fluidification et la polycondensation des résines qui permettent d'obtenir un matériau homogène, non poreux et présentant la finition superficielle requise. Le stratifié haute pression HPL est fourni sous la forme de panneaux disponibles en format, en épaisseurs et en finitions superficielles différents.
